MOV**IYNT**™

TRANSFORMING MOBILITY FOR ENTERPRISE

Moviynt™
Mobility Transformed

Moviynt™ has developed a mobile platform that enables enterprise to seamlessly develop, connect, and deploy mobile solutions that can significantly improve business operations. Using this enhanced capability enterprise can:

SAP® Premium Certified
Integration with SAP Applications

Deploy an integrated mobile solutions on SAP in weeks and not months

Enable online, offline and hybrid mobile operations to eliminate downtime and increase productivity

Seamlessly integrate with SAP without any middleware , helping to eliminate additional infrastructure cost and increase throughput

Expand the ability of enterprise systems to use native features of mobile devices

WHY CHOOSE US?

CONNECTIVITY
Mobility is quickly becoming an integral part of warehouse automation.
Staying connected is not always feasible considering the growing size of warehouse and increased use of independent third party logistics, coupled with a mobile workforce that relies more and more on mobile devices to perform their day to day activities. Moviynt™ provides a solution that allows your workforce to perform tasks seamlessly in an environment that is not fully connected to their back-end enterprise system.

AGILITY
Enterprises are becoming agile and nimble in their operations.
MRP practices are becoming leaner, resulting in increased order processing and reduced order sizes. Moviynt™ supports high velocity operations with sub-second response times.

PRODUCTIVITY
Smart devices have become extremely powerful.
Businesses are looking to integrate smart devices into their ERP applications to increase productivity, accuracy, auditability and collaboration. Moviynt™ applications work seamlessly in a device-agnostic manner, while also integrating all native capability of smart devices.

LET'S TALK TRANSFORMING MOBILITY

Moviynt core capability is driven by the founders background and expertise in that had extensive background from consulting and core software development.

"In our conversation with large companies, we have seen a pattern of challenges in the day to day use of smart devices around Industrial Mobility. Few of these challenges formed the core capabilities of Moviynt™ application, challenges such as offline capability, leveraging native capabilities of the devices and lastly seamlessly integration to ERP without relying on API's alone. Moviynt was formed with the purpose to solve these problems. Our founders have lots of experience in this area and hence our ability to solve this problem allows us to promise full offline capabilities, direct integration of device with SAP and enable native capabilities to help enhance end to end digital transformation for enterprise."

~ Vinod Nanu, CEO, Moviynt™

MOVIYNT™ SOLUTION

Moviynt™ provides enhanced ability for customers to perform critical SAP related processes, even when not connected to the network, while also having the ability to use the native capability of the mobile device.

- ✓ Integrated as a development platform
- ✓ No middleware, run time engine runs directly in ERP (SAP, Oracle, etc.)
- ✓ Client runs natively in offline mode and access server only when required.
- ✓ Continues to run even when disconnected from ERP back-end
- ✓ Applies to all industrial mobility processes namely (Warehouse, Plant maintenance, Production Orders, Service, etc.)
- ✓ Can run alongside SAP console
- ✓ Forward compatibility with ECC, S4 and S4HC

MOVIYNT'S™ INTEGRATED PLATFORM

Moviynt™ runs on Apple®, Windows®, and Android™ platforms. Moviynt's™ core capability is focused mainly in bringing the complete set of device features to the enterprise solutions while also ensuring that connectivity and bandwidth requirements no longer impede while performing critical business processes that have dependence on mobility.

- ✓ High speed warehouse related operations in connected, disconnected, and occasionally connected environments
- ✓ Offline field service operations using complete offline mode with ability to sync information to back-end ERP system as, and when, connected
- ✓ Initiate quality notifications using image capture
- ✓ Enable workflow events
- ✓ Proof of delivery signature capture.
